BATTERY

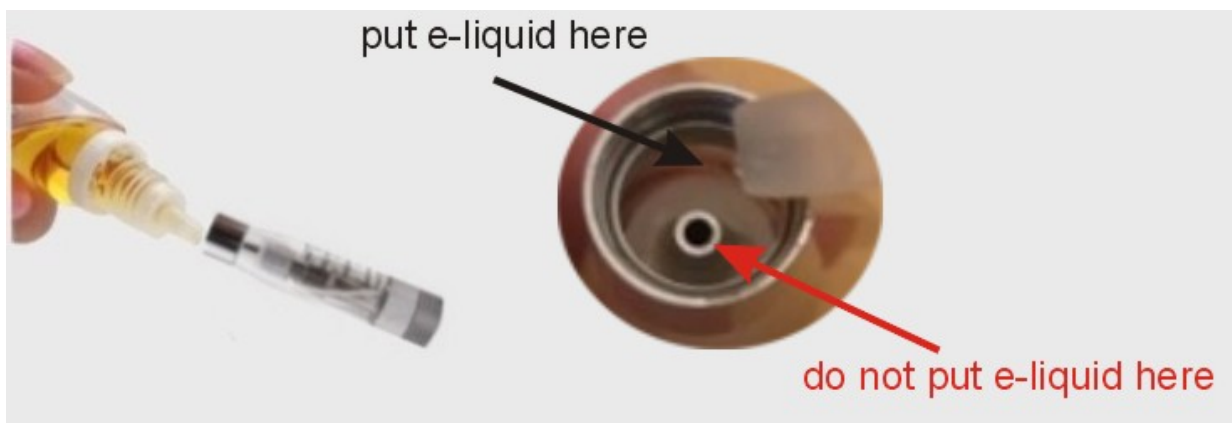

When you receive the batteries they will probably be half charged. As a result, the first charging time is about an hour. This starter kit has the "5-click" System. It means that the battery can be switched off. To turn on the battery, you should press the manual button 5 times within 2 seconds. The lock system protects the device against accidental operation while wearing it. Do not store the battery in hot and wet conditions. If the battery is dropped, it can cause damage.

CHARGING

To charge a battery, screw the battery into the USB charger. After that, plug the USB charger into the wall charger (AC charger) or connect the USB charger to your computer. The charging time is 1-3 hours (depending on how the battery is charged already). At the beginning of charging, the battery will signal by blinking a few times. During charging, the light on the USB module is red. Once the battery is charged, the light will change from red to green.

FILLING UP THE CLEAROMIZER

Step 1: Unscrew the drip tip from the clearomizer.

Step 2: Fill 1.6ml of e-liquid from the side. Do NOT pour the e-liquid into the tube in the middle as the middle tube is for airflow.

Step 3: Screw the drip tip back in.

Please note: It is a good idea to regularly top up and tip the clearomizer frequently to keep the wicks wet as it will burn out if it runs dry. We also recommend waiting 5 minutes for the e-liquid to feed into the coil before you start to vape. Otherwise you will get a burnt taste when vaping.

USING THE ELECTRONIC CIGARETTE

To use the e-cigarette, gently screw the clearomizer (which has been filled with e-liquid) into the battery. The battery should be on (if the battery is off, press the manual button 5 times within 2 seconds).

After screwing the e-cigarette together, press the battery button on and hold it down while simultaneously starting to inhale. After inhaling, remove your finger from the button.

It is recommended that there are pauses between inhalations to prevent excessive overheating of the clearomizer.

Remember that e-liquids are not intended for direct consumption (e.g. they are not for drinking).
