

The instructions on how to use the starter are below.

## BATTERY

When you receive the batteries they will probably be half charged. As a result, the first charging time is about an hour. Do not store the battery in hot and wet conditions. If the battery is dropped, it can cause damage.

## CHARGING

To charge a battery, screw the battery into the USB charger. After that, plug the USB charger into the wall charger (AC charger) or connect the USB charger to your computer. The charging time is 1-2 hours (depending on how the battery is charged already). At the beginning of charging, the battery will signal by blinking a few times. During charging, the light on the USB module is red. Once the battery is charged, the light will change from red to green.

## USING THE ELECTRONIC CIGARETTE

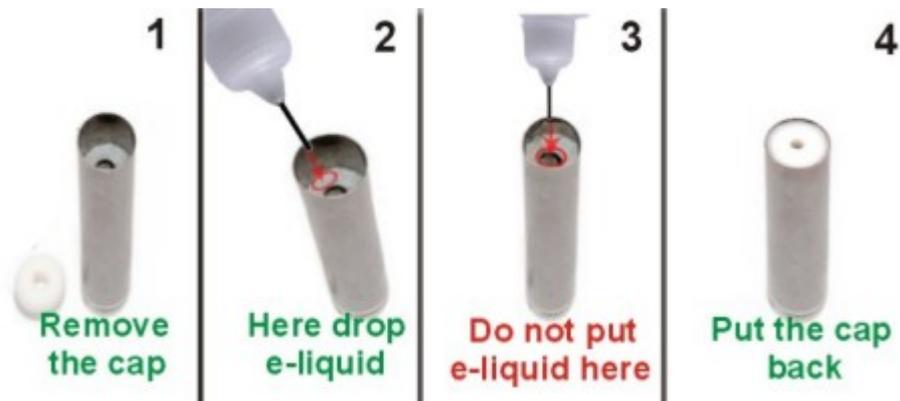

To use the e-cigarette, gently screw cartomizer into the battery. After screwing the cartomizer together, the e-cigarette is ready to use. It is recommended that there are pauses between inhalations to prevent excessive overheating of the cartomizer.

**Please note:** It is a good idea to regularly top up and tip the cartomizer frequently to keep the wicks wet as it will burn out if it runs dry. Otherwise you will get a burnt taste when vaping.

**The instructions on how to fill a cartomizer with an e-liquid are as follows:**

- 1) Remove the white silicone bung from the end of the cartomizer using tweezers or a bent paper clip.
- 2) Carefully holding the cartomizer at an angle and drip e-liquid (around 5-20 drops) onto the white wadding/wicking material whilst turning the cartomizer slowly between your fingers to aid coverage. Do NOT pour the e-liquid into the tube in the middle as the middle tube is for airflow -just put it around the edges.
- 3) Put the white silicone bug back into the cartomizer and leave the cartomizer in a vertical position for about 10-15 minutes to stabilize e-liquid.

Please note: It is a good idea to regularly top up and tip the cartomizer to keep the wicks wet as it will burn out if it runs dry - otherwise you may experience a burnt taste when vaping.
